'Smart Home', 'Home Automation', 'the Home of the Future'... you've heard all the buzzwords, but what do they mean? Basically, they refer to the underlying technology used to 'control' your home.

Today's home encompasses some, or all, of a range of services - lighting, security, heating, ventilation and air-conditioning, home theatre, distributed audio, motorised curtains and blinds, reticulation systems and wireless PC networks. A smart home integrates these systems to give you simple, complete control.

At Dynalite, we understand that no matter how much integration takes place, if you're not comfortable with the technology, or find it difficult to use, then it's not a smart home.

That's why we create solutions that complement and enhance your lifestyle - systems the whole family can use. The Dynalite Smart Home... it's about streamlining your life, not complicating it.

THE BASICS – LIGHTING CONTROL

The foundation of any smart home system is lighting control - it's the logical backbone to which everything else is connected. We've been designing and manufacturing lighting control equipment for more than 25 years and always have been at the forefront of our industry.

A simple lighting control system gives you the power to completely transform your environment - create a mood to suit any occasion, define and highlight features, show off your home in it's best light... all at the touch of a button.

Life is all about growth and your needs may change over time. The modular 'building-block' approach to the Dynalite system lets you add components as, and when, you require.

PEACE OF MIND – SECURITY

There's no doubt your most valuable asset is your family, but your possessions are worth protecting too, regardless of whether you're home or away. Integration with your security system provides added precautions, such as interior, exterior and garden lighting turning to 'full' when the alarm signals a disturbance. While you're away enjoying a hard-earned break, run a lighting pattern that creates a lived-in look, further deterring unwanted intruders.

At home, give your family peace of mind by creating a reassuring path of light, to make late-night visits to the bathroom less daunting.

ENERGY SAVING MADE EASY

ENERGY SAVING MADE EASY

Don't waste energy when you're not home... shut down the whole house in one simple action. Activate the 'Goodbye' setting as you leave and turn off lighting, airconditioning, sprinklers - in fact, anything you decide.

Your home is as individual as you and the way you live should be determined by you, not by the system. The beauty of the Dynalite Smart Home is its flexibility - that all settings are customised to meet your needs, as simple or intricate as you like.

LIGHTS, CAMERA, ACTION

LIGHTS,CAMERA, ACTION!

Bring Hollywood home, integrate with your home theatre components to provide the full cinema experience in your living room. In one easy step you can lower the projection screen, close motorised curtains or blinds, turn on the projector and dim the lights. Total control at your fingertips.

One. Lighting Control

- Create a mood, define a space... lighting is about more than good looks, it's the key to a comfortable and welcoming home.

Two. Security

- Give your home a lived-in look while you're away, deterring unwanted visitors and safeguarding the things you hold dear.

Three. Temperature Control and Blinds

- Be comfortable in your home. Reliably control the thermostat and ensure efficient use of energy by automatically closing curtains and blinds during hot summer months and taking advantage of warming winter sun.

Four. Home Theatre

- Watch your favourite movies and enjoy the total theatre experience... dim the lights, lower the screen and start the movie with the touch of a button.

Five. Multi-Room Audio Systems

- Control your multi-source, multi-zone distributed audio system and enjoy your favourite tunes in peace, while the kids listen to that noise they call music far, far away at the other end of the house.

Six. Pool, Spa and Reticulation Systems

- Control the temperature and filters on outdoor spas and pools. Ensure your garden receives the attention it deserves when you're away, by using time clocks to turn sprinkler systems on and off.

Seven. Sensors

- Dynalite multi-function sensors can detect motion in a room, or the level of available natural light, and adjust artificial lighting levels to suit. They also pick up infrared commands from remote controls for added flexibility.

Eight. Endless control options

- Don't let yourself be limited. Control the whole house from the comfort of your armchair. Dynalite systems can be programmed and controlled via a Java-enabled phone, PDA or Internet browser, from anywhere in the world!

HOW DO WE DO IT?

HOW DO WE DO IT?

The Dynalite range of smart home products consists of concealed 'controllers' to which lighting and other loads are connected, 'user interfaces' that give you the power to interact with the system and 'integration devices', that connect your home's services so they communicate and perform seamlessly as one.

WHAT'S IN IT FOR YOU?

WHAT'S IN IT FOR YOU?

When you install a Dynalite Smart Home system, the result is complete, carefree and uncomplicated control. After a hard day's work, the 'Welcome Home' setting disarms security, turns on lights to a level pre-determined by you and activates the audio system, filling the house with sound. The temperature is ideal, thanks to the timeclock that initiated the air conditioning an hour ago. The blinds and curtains are set perfectly, according to the time of day and time of year. In short, your home is whatever you want to be – the choice is yours.

Control possibilities are infinite. Take charge from your favourite armchair, using nothing more than your mobile phone, or enjoy the

beautiful Revolution user control panels and touch screens as they complement your interior design in glass, stone, ceramic, metal or any finish you can imagine.
